

1. Do a survey. Find out ...

- **how many classmates live in a nuclear family and how many live in an extended family;**
- **how many classmates have both parents working;**
- **how many classmates spend at least one hour a day doing housework;**
- **how many classmates have parents who spend at least one hour a day helping them with their homework;**
- **what your classmates think the ideal family is like.**

Model the report to the class.

Hi, everybody. On behalf of my group, I would like to tell you the results of the survey which my group has just done as follows.

- 23 students live in a nuclear family and 19 students live in an extended one.**
- 30 students have both parents working.**
- 35 students spend at least one hour a day doing housework.**
- 15 students have parents who spend at least one hour a day helping them with their homework.**
- My classmates think the ideal family is that parents both work to share the financial burden and do the household duties together.**

That's all.

2. Work in groups. Compare your findings and get ready to report to the class.

It's your turn!

3. Check the other groups' s projects and give them your feedbacks!
